Illinois Emergency Management Agency

ILLINOIS INTEROPERABILITY FIELD OPERATIONS GUIDE

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

INTRODUCTION

The *Illinois Interoperability Field Operations Guide (I²FOG)* is a collection of technical reference material to aid Illinois Communications Unit personnel in establishing communications solutions during emergency incidents and planned events. The ability of responders to communicate in real time is critical to establishing command and control at the scene of an incident.

The *I²FOG* condenses information from the *Illinois Tactical Interoperable Communications Plan (TICP)* and is consistent with the goals identified in the *Illinois Statewide Communications Interoperability Plan (SCIP)* and the vision statement of the U.S. Department of Homeland Security (DHS), wherein emergency responders can communicate as needed, on demand, and as authorized, at all levels of government. This document is printed with DHS grant money.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

This FOG contains nationwide and statewide interoperability channels that should be programmed into all public safety radios in the appropriate frequency band.

Thank you,

Matthew Miller

Statewide Interoperability Coordinator (SWIC)

Illinois Emergency Management Agency & Office of
Homeland Security (IEMA & OHS)

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

LICENSING DISCLAIMER

Nothing in this document shall be construed to serve as authorization for any agency or individual to operate equipment on radio channels without the proper authorization or licensing by the Federal Communications Commission (FCC).

SECTION 14 NOTES..... 227

UNCONTROLLED UNCLASSIFIED – PUBLIC SAFETY SENSITIVE

Page | 6

SECTION 1 Requests for Communications Assets

- An agency needing support of a communications asset will contact their local dispatch center.
- The local dispatch center will contact the State Emergency Operations Center (SEOC) and make the request. The SEOC will open a mission and start official documentation of the incident.
- The SEOC will contact the closest and most appropriate state or local asset that can support the request and determine the availability and estimated time of deployment. This will normally be routed through the local Emergency Management Agency (EMA).
- The SEOC will then report the response information back to the requesting dispatch center.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

- The SEOC will verify that the responding asset, the requesting jurisdiction dispatch center, and the on-scene commander all have a common mutual aid channel.
- The responding asset will check with the Incident Commander (IC) for staging of the asset or to determine a reporting location.
- The IC will designate a vehicle to meet the arriving communications asset and escort them to the designated location.
- The communications asset will establish communications with the SEOC once on scene.
- The IC will designate a COML who will prepare an Incident Radio Communications Plan (ICS Form 205). The ICS205 will be provided to the communications asset. The Communications Plan will also include phone numbers for incident personnel and other significant locations.

UNCONTROLLED UNCLASSIFIED – PUBLIC SAFETY SENSITIVE

Page | 8

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

- If necessary, the IC will designate law enforcement personnel to provide security at the site of the communications asset.
- The communications asset will rapidly prepare to activate interoperable communications necessary to support on-scene incident personnel.
- The communications asset will have a cache of 800 MHz, Very High Frequency (VHF), and Ultra High Frequency (UHF) portable radios to issue to incident personnel, if necessary.
- The communications asset should be prepared to remain on scene staffed by trained communications personnel until released by the IC or designee.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

SECTION 2 Interoperable Communications

Sec. 2-1 STARCOM21 STATEWIDE TRUNKED RADIO SYSTEM

The STARCOM21 system serves as the technology platform for Illinois interoperable communications. Many agencies have their own assigned talkgroups on the STARCOM21 platform. These systems are used for day-to-day operations within each agency, interoperability between agencies, and statewide interoperability when necessary. For statewide interoperability, all STARCOM21 radios are programmed with the Statewide Interoperability Template (SWIT).

Sec. 2-2 CONVENTIONAL CHANNELS

The Illinois and national conventional interoperability channels can be used as required, but coordination with the state COMU will help prevent interference and multiple users attempting to use the same channel within a given area.

Conventional repeaters activated or deployed on the conventional interoperable pairs and using an antenna more than 20 feet above ground should coordinate its use with the state COMU for the same reasons.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

SECTION 3 Statewide Interoperability Template (SWIT)

The Illinois Statewide Interoperability Executive Committee (SIEC) has approved a SWIT to support improved interoperable communication options throughout the State of Illinois. It is the suggestion of the SIEC that each agency include these channels in their radios.

The tables listed in this Section define each STARCOM21 talkgroup and conventional channel in the SWIT, followed by a visor card which provides guidance on STARCOM21 radio interoperability programming.

Sec. 3-1 GENERALLY

- The following color coding is used in the non-trunked portion of this document to assist with identification of conventional analog, P25 digital, and P25 digital secure (encrypted) channels:

Conventional
Analog

P25 Digital

P25 Digital
Secure

- The following color coding is used in the trunking portion of this document to assist with the identification of general use talkgroups and secure (encrypted) talkgroups.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

Trunked
General Use

Trunked Secure

Sec. 3-1(a) SWIT Programming Guides by Discipline and Type

The following link provides access to the SWIT programming guides for STARCOM radios according to public safety discipline or type of radio. Agencies programming STARCOM radios must use the programming guide appropriate to their discipline.

<https://iemaohs.illinois.gov/hs/interoperability/committee.html>.

Sec. 3-1(b) State Encryption Keys

State encryption keys shall not be added to any radio or other device, except as authorized by the SWIC or designee.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

Sec. 3-3 700/800 MHz INTEROPERABILITY SPECIAL INFORMATION

Notes: The following information details the Primary Use for the 700/800 channels based on the embedded code within the channel name. For example: 8CALL90 is a "Calling Channel."

CALL	Calling Channel
TAC	General Public Safety - Tactical/Coordination
LAW	Law Enforcement
FIRE	Fire Department
EMS	Emergency Medical Services
GTAC	Other Public Service
MOB	Mobile Repeater
DATA	Mobile Data
AG	Air-Ground
FTAC	Fire Tactical (analog)
LTAC	Law Tactical (analog)
MTAC	EMS/Medical Tactical (analog)
US	National Itinerant - Convoy Operations (analog or digital)

- AES-256 encryption is authorized on many 700 MHz interoperability frequencies. Zone SWIT-SECURE BY has been established to provide

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

700 MHz interoperable secure conventional communications in Illinois.

- Encrypted Zones SECURE BY (Conventional) and SECURE A (Trunked) are listed separately for each public safety discipline.
- Encryption for other 700 MHz frequencies/zones in Illinois is discouraged.

- The 7-US- frequencies are 700 MHz Low Power Itinerant Channels licensed for itinerant mobile use (convoy operations).
- These channels are not nationwide interoperability channels. The State of Illinois (SIEC) is responsible for the administration of these Transmit power for 7-US- channels, in either analog or digital mode, is limited to 2 watts ERP.
- It is recommended that radios are programmed for "mixed-mode" (analog & digital) receive for the 7-US- itinerant channels. Zone SWIT-BI Channels 1-8 are analog and are equivalent to ITTF-BI Channels 1-8.
- Zone SWIT-BI Channels 9-14 are digital equivalents to their matching analog Channels.

- These channels are reserved for air-ground communications to be used by low-altitude aircraft and ground-based units.
- Airborne use of these channels is limited to aircraft flying at or below 1500 feet (457 meters) above ground level. Aircraft are limited to 2 watts effective radiated power on the air-ground channels while airborne.
- Aircraft may transmit on either the mobile or base transmit side of the channel pair.
- 7AG88D is recommended for landing zone use. Use of 7AG88 (repeated) is not recommended during landing zone operations. These channels are not nationwide interoperability channels.

- Use of SWIT-SECURE BY frequencies must be approved through the SWIC/IEMA & OHS Operations Center. Requests should be made via the IL-CALL SC21 Talkgroup, 217-782-7860 and/or ema.dispatcher@illinois.gov.
- The intent of this zone is to operate in encrypted mode. Current FCC rules require that radios must be programmed with a button or feature that disables encryption on each channel in this zone without physically changing zones.

Sec. 3-6 SUGGESTED ZONE AND CHANNEL PROGRAMMING FOR STARCOM21 RADIOS

The following tables in this section illustrate zone and channel programming for STARCOM21 radios which are recommended to ease the transition from the legacy Illinois Terrorism Task Force (ITTF) template to the SWIT.

Once the transition process is complete and the SWIT programming deadline has passed, the zones listed below as “ITTF Old (All Radios)” may be removed from STARCOM21 radios.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

700 MHz Nationwide Air-Ground Channels

*7AG88D is recommended for Landing Zone Use

- TX NAC: \$293 (659_{10}). RX NAC \$F7E (3966_{10}). These channels are reserved for air-ground communications to be used by low-altitude aircraft and ground-based stations: See FCC rule 90.531(7). (i) Airborne use of these channels is limited to aircraft flying at or below 457 meters (1500 feet) above ground level. (ii) Aircraft are limited to 2 watts effective radiated power (ERP) when transmitting while airborne on these channels. (iii) Aircraft may transmit on either the mobile or base transmit side of the channel pair. (iv) States are responsible for the administration of these channels.
- Utilize normal squelch in programming which will use the default talkgroup - \$0001 (1_{10}).

700 MHz NATIONWIDE DEPLOYABLE TRUNKED SYSTEM CHANNELS

LICENSING REQUIRED: these frequencies are **NOT** covered by the “blanket authorization” for nationwide interoperability channels. Use of these channels must be licensed or authorized by STA.

Common Nationwide System ID: \$101 (257₁₀)	Common Nationwide WACN: \$BF7CC
--	--

“\$” indicates hexadecimal value, “₁₀” subscript indicates decimal value.

ASSIGNMENT	CHANNEL NAME	MOBILE RX	MOBILE RX CTCSS/NAC	MOBILE TX	MOBILE TX CTCSS/NAC
------------	--------------	-----------	------------------------	-----------	------------------------

*Not available for use above the A-Line in Pennsylvania, New York, and Vermont.

- NRPC is the curator of the common nationwide system keys. To apply for system keys, contact the NRPC: n rpc.us
- Additional working channels separate from this list can be allocated locally to deployable systems subject to individual RPC approval.
- Each deployable trunk system should coordinate their unique NAC Code with the NRPC.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

P25 Digital Codes

NAC – NETWORK ACCESS CODES

\$293 (659 ₁₀)	Default NAC
\$F7E (3966 ₁₀)	Receiver will un-squelch with any incoming NAC
\$F7F (3967 ₁₀)	A repeater with this NAC will allow incoming signals to be repeated with the NAC intact

TGID – TALKGROUP ID

\$0001 (1 ₁₀)	Default TGID, should be used in systems where no other talkgroups are defined
\$0000 (0 ₁₀)	No-one or a talkgroup with no users – used for individual call
\$FFFF (65535 ₁₀)	Reserved as a talkgroup which includes everyone

UID – UNIT ID

\$000000	No-one. This value is never assigned to a radio unit
\$000001-\$98767F	For general use.
\$989680-\$FFFFFE	For talk group use or other special purposes.
\$FFFFFF	Designates everyone – used when implementing a group call with a TGID

VHF Marine Channels

UNCONTROLLED UNCLASSIFIED – PUBLIC SAFETY SENSITIVE

PAGE | 123

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

2-VHF Marine Channels

CHANNEL	FREQUENCY	TONE	USAGE
16	156.8000 W	CSQ	International Distress, Safety and Calling
17	156.8500 W	CSQ	State & local govt maritime control
21A	157.0500 W	CSQ	U.S. Coast Guard assigned
23A	157.1500 W	CSQ	U.S. Coast Guard assigned
81A	157.0750 W	CSQ	Environmental protection ops or as assigned
83A	157.1750 W	CSQ	U.S. Coast Guard assigned

¹ Use VHF Marine channel 16 to make contact (30 seconds max), then move to the appropriate *working* channel as directed by the local USCG Sector Commander. Non-maritime use of any VHF Maritime channel requires FCC Special Temporary Authority or appropriate license. VHF marine channels use wideband FM. Emission 16K00F3E.

Direction from USCG, FCC, or FAA overrides information in this table. This table does not convey authority to operate.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

SECTION 10 STRATEGIC TECHNOLOGY RESERVE (STR)

The state of Illinois has developed the STR: pre-positioned, interoperable communications assets that support interoperable communications and can restore basic communications when terrestrial communications are non-existent, or severely compromised. The STR equipment includes Mission Ready Packages (MRPs) and Deployable Communications Resources and are described in the following sub-sections.

Sec. 10-1 STR LOCATIONS

Illinois STR Resources locations are shown by IEMA & OHS Region in the following maps.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

Sec. 10-2 MISSION READY PACKAGES (MRPs)

MRPs streamline the process of obtaining and providing mutual aid by identifying all the resources available to assist other jurisdictions during a critical incident. MRPs in Illinois are based on either a Unified Command Post (UCP) platform or an Illinois Transportable Emergency Communications System (ITECS) platform and one or more communications gateways, deployable interoperability repeaters, and radio caches.

Sec. 10-2(a) Illinois Mission Ready Packages Equipment Detail

MRPs identified in this guide contain a minimum of the following equipment:

MRP EQUIPMENT	MRP BASED ON

SECTION 11 Emergency Wireless Carrier Services

Interoperable communications requirements for responses to many incidents and planned events can be handled with the coordinated response of local, regional, and state resources. However, other responses and events may require additional support due to their location, scope, or other factors. Some national wireless carrier providers provide emergency response services and capabilities to meet these needs.

Coordination of resource deployments by wireless carrier services should be coordinated through the IEMA & OHS Operations Center at 217-782-7860.

SECTION 13 Interoperability “Watch Out” Situations

- Incidents using channels in more than one spectrum band.
- Unable to communicate critical information due to radio congestion.
- Unfamiliar with radio system(s) or assigned radio functionality.
- Instructions and assignments not clear.
- Inadequate communication with responders or supervisors.
- Dispatch to Dispatch channel patching.
- Inadequate number of tactical channels available or assigned.
- Multiple conversations on the same talkgroup or channel.
- Radio systems used for interoperability do not completely support the incident and lack good radio coverage.
- High levels of background noise.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024

- Emergency button activation – who is receiving the notification?
- Multiple agencies performing radio programming at the incident.
- Organizations in the system do not use the same vocabulary.
- Mobile gateway devices being used in a strategic (wide area) rather than tactical (local) environment.
- Multiple mobile gateways available at the incident.
- Single COML for the incident is not identified.
- Working in the deep interior of a building, parking garage, or underground.

State of Illinois Interoperable Communications Field Operations Guide (FOG) Version 3.0 August 2024
